Mpox Vaccination in New Jersey

Who can get vaccinated?

The vaccine for mpox virus is called JYNNEOS.

In New Jersey, the following people may be eligible for vaccination:

- People who have known or suspected exposure to someone with mpox in the past two weeks
- People who had a sex partner in the past two weeks who was diagnosed with mpox
(Contact your [local health department](#) to coordinate vaccination)
- Gay, bisexual, and other men who have sex with men, transgender or nonbinary people who in the past 6 months have had:
 - A new diagnosis of one or more sexually transmitted diseases (i.e., chlamydia, gonorrhea, or syphilis)
 - More than one sex partner
- People who have had any of the following in the past 6 months:
 - Sex at a commercial sex venue
 - Sex in association with a large public event in a geographic area where mpox transmission is occurring
 - Sex in exchange for money or other items
- Sexual partners of people with any of the above risks
- People who anticipate experiencing any of the above risks
- People who work in settings where they may be exposed to mpox*
 - People who work with orthopoxviruses in a laboratory

(*Consult with your [local health department](#))

HIGH PRIORITY GROUPS

People who are eligible for vaccination and who also have a condition that may increase their risk for severe disease should be considered high priority for vaccination, including those who:

- Have HIV or other causes of a weakened immune system
- Have a history of atopic dermatitis or eczema
